Gilliss Oil Tools would like to announce Diamond Energy Services as the winner of the 2014 MLB Getaway Package. Diamond Energy Services quickly came to realize the advantage of our Bulldog clamp over a traditional sling in the areas of both safety and efficiency. We will be offering this prize package again for the 2015 calendar year with the same entry requirements. We would like to take this opportunity to thank all who have purchased the Bulldog Clamp in the past, and those who intend to do so in the future.

Gilliss Oil Tools : Bulldog Clamp

Simple • Safe • Efficient

As a typical service rig company, the tedious procedure of picking up and laying down pipe has always been done manually; it has been the norm, the only way we know how. Now, Diamond Energy Services has a new norm: the Gilliss Oil Tools Bulldog Clamp. It is easy to use, safe, and efficient.

Diamond Energy Services operates a fleet of twenty service rigs in Southwest and West Central Saskatchewan, and all rigs use the Bulldog Clamp for picking up and laying down tubing. Our company heard about the Bulldog Clamp from a well site consultant, and decided to give the tool a try. What started out as one tool, quickly became two, then three, next thing we knew, the tool was being used company-wide. Out of the four sizes available, Diamond is now using the 2-7/8", 3-1/2" and 4-1/2".

It quickly became evident that the Bulldog Clamp was easy to use. Both management and field crews noticed the benefits immediately. Rig crews commented on the simplicity of the clamp and how easy it was to catch on to. Once shown the proper use of the tool, new Floorhands were able to easily operate the tool.

From a management standpoint, the Bulldog Clamp saves employees; men are not constantly straining their backs, and are not easily worn out. Ultimately, this lowers injuries and helps overall retention of employees. Furthermore it saves time, and is much safer than the old manual methods. Diamond can attest that since our rigs have started using the Bulldog Clamp, zero back injuries have occurred.

Our company highly recommends the Bulldog Clamp to any oil field company that is picking up and laying down tubing. For these procedures, the tool has quickly become our only process used. From a service rig perspective, the Bulldog Clamp is extremely beneficial; it is simple, safe, and efficient.
